## CARE AND MAINTENANCE

Wonderwood Timber Flooring is a quality product, simply take some precautions and follow the regular cleaning and maintenance routines, your floor will stay wonderful from time to time. Please find full instructions on the Wonderwood website, which includes the following:

- Routine Maintenance
- Preventative Maintenance
- Preventing scratches & dents
- Preventing discoloration
- Preventing expansion & shrinkage
- Fixing dings & scratches
- Common Characteristics of Timber Floors

## INSTALLATION GUIDELINES

Wonderwood Timber Flooring is designed to be installed by secret nailed, direct adhesive fixing (glue down) or as a floated floor. Please inspect each board in optimal lighting for visual defect and locking system is proper functioning before and during installation. Products are considered of acceptable quality and

structure once installed, do not install if in doubt. Please note that only direct adhesive fixing system is suitable for Herringbone or Chevron parquetry installation. Heavy and bulky objects, such as island bench, should not be placed on floating floors, Wonderwood Timber Flooring must be cut in and installed around such objects. 8% to 10% of wastage floors is recommended to cover any sorting, trimming or visual selection during installation. 20% of wastage floors is expected for Herringbone or Chevron parquetry.

### Timber Flooring Facts and Variation

Wonderwood Timber Flooring are made from natural materials and differ in colour, texture and naturally occurring features within and between individual pieces and batches of the same species. Sample, reproductions in printing and photography are only for guidance; they provide a colour indication but are not necessarily representative of the overall effect or design. Please be cautious when making your selection from a single sample, reproductions in printing and photography, as these are only an indication. Timber flooring products will vary from board to board, job to job, and from the samples on display in all jobs supplied. The colour of your flooring may change over time as a result of UV light and oxygen exposure. Minor splits and wood checks/cracks are naturally occurrences in timber. Timber flooring products continue to absorb and release moisture, expand and contract over their lifetime depending on local conditions, environmental conditions, and weather changes.

Even with proper installation, slight expansion and contraction, as well as board separation, is normal; however, excessive movement due to extreme weather conditions is to be expected. It is critical to be aware of and to check conditions to ensure that your floor performs within tolerances. Installing your timber floor according to Wonderwood Floors installation guideline is crucial for a high-performing floor.

### Timber Flooring Moisture Content

Before installation, a moisture meter must be equipped to ensure the moisture content of Wonderwood Timber Flooring remains in about 8%-12% on average, as timber floor is a natural product, a significant change of moisture content may result in product distortion. Please find full guidelines on the Wonderwood website, which includes the following:

- Preparation
- Installation
- Floating Method
- Direct Adhesive Method
- Finishing Molding
